## Projects

### Chatbot For University website

- The university chatbot system helps people who browse university websites and is implemented using different deep learning techniques like NLP.
- This chatbot is integrated with all the information that is useful to know fully about the respective website (College or University) and the chatbot is developed using RASA framework.
- DIET(Dual Intent and Entity Transformer) classifier is used which performs both intent classification and entity recognition.
- The university chatbot educates future applicants about institution, programs, and courses. It explains the admission procedures, promote open days, university events, and provides deadlines for registering applications.
